WHAT ARE THE RISKS AND WHAT COULD I GET IN RETURN?

RISK INDICATOR

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

The risk indicator assumes you keep the product for 5 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less.
You may not be able to sell your product easily or you may have to sell at a price that significantly impacts on how much you get back.

We have classified this product as 4 out of 7, which is a medium risk class. This rates the potential losses from future performance at a medium level, and poor market conditions could impact our capacity to pay you.

Investors shall note that besides the risks included in the risk indicator, other risks such as liquidity risk, counterparty risk, credit risk and fixed interest securities risk, equity risk, risk linked to use of derivative instruments and hedging risk may affect the fund performance. Please refer to the Prospectus for further details.

PAST PERFORMANCE AND PREVIOUS PERFORMANCE SCENARIOS: The cost, performance and risk calculations included in this key information document follow the methodology prescribed by EU rules. Note that the performance scenarios calculated above are derived exclusively from the past performance of the Company's share price and that past performance is not a guide to future returns. Information about past performance (when available) and performance scenario calculations can be found on <https://www.march-am.com>.

Any past performance data presented will be for up to 10 calendar years from the date of the launch of a share class.
