## What is this product?

### Type

The Sub-Fund is part of ALTEX fund. The Depositary is Quintet Private Bank (Europe) S.A.

### Term

The investment horizon is medium term and should be at least 5 years.

### Objectives

The Sub-Fund aims to generate long term capital appreciation and preservation by investing in a concentrated portfolio of growth style equities, while seeking to contain volatility and risk with complementary currency and beta hedging strategies.

While respecting the principle of risk diversification, the Sub-Fund's assets are invested mainly in equities, equity linked securities and derivatives without restrictions on economic sector or geographic origin with a flexible beta exposure: as market conditions change, the portfolio's exposure to equity, and consequently its beta exposure, will also vary.

The Sub-fund seeks an attractive risk-adjusted return objective by capturing the excess return (alpha) from growth stocks' long-term outperformance vs. global equity indices. The equity target universe is updated on a quarterly basis using proprietary quantitative filters established by the Management Company (based on financial ratios, balance sheet data and income statement features and evolution over time), while a second discretionary stock selection process is performed through in-depth analysis of each target company. Final portfolio construction decisions are taken on a discretionary basis by the Management Company weekly or at any other frequency that may be required due to relevant changes in markets or individual stocks. The strategy seeks to capture long-term secular business growth and price upward trends, so holdings are maintained as long as they continue to meet their growth characteristics.

### Intended retail investor

This Sub-Fund is aimed at investors wishing to diversify their portfolio by investing in a product that provides capital appreciation regardless of how the financial markets evolve and to limit fluctuations in value. To achieve this, the Sub-Fund invests a substantial part of its assets in hedges with the purpose of limiting market volatility and risk.
